

BI xPress

Easily Deploy, Audit, and Monitor SSIS Packages

SentryOne BI xPress provides a proven framework for building SQL Server Integration Services (SSIS) packages, installing auditing frameworks, and monitoring data packages—increasing the speed and quality of data-centric application deployments on the Microsoft Data Platform.

Want a better, faster way to manage Microsoft data packages?

Accurately managing data packages can consume significant time and resources from data teams, causing bottlenecks in efficient deployment:

- Poring over error messages when data packages fail is time-consuming and often unproductive
- Capturing errors often means custom-built event handlers, requiring additional resources
- Troubleshooting data package performance in production can be difficult

BI xPress accelerates data package management across the app lifecycle

BI xPress helps data pros efficiently manage SSIS data packages from development through production, ensuring speed and accuracy of data-centric apps:

- Quickly build data packages and eliminate repetitive coding tasks
- Ensure data packages run as expected and monitor their execution with an auditing framework
- Use detailed reporting to monitor package performance and proactively take corrective action

BI xPress features and highlights

SSIS Monitoring Console

View data recorded during execution on SSIS packages, including data flow tasks, and use the Auditing Framework Wizard to customize the level of detail.

Report Performance Monitor

Monitor and troubleshoot SQL Server Reporting Services

(SSRS) reports by viewing critical performance stats.

Notification Framework Wizard

Create custom notifications based on events in your SSIS packages with the BI xPress Notification Framework Wizard. Customize the notification format, specify delivery options, and set triggers based on

severity, package name, or other dynamic criteria.

BI Compare

See differences between two SSIS packages, SSRS reports, and SSAS dimensions or cubes. Compare server setups or compare local files to deployed items on servers. Drill down to see detailed views.

Auditing Framework Wizard

View detailed logging and performance information about SSIS packages. Easily add, remove, or edit the framework within SSIS packages during development or after deployment to the SSIS catalog.

MDX Calculation Builder

Create complex MDX calculations in a few clicks from available MDX

templates, eliminating manual coding. Use the templates to easily add dynamic time-calculated members to a cube's MDX calculation script.

Best Practices Analyzer

Inspect your environment for adherence to best practices for performance, maintainability, and stability, among others. Store the results for later review or

export results to XML to track how packages are improving over time.

Secure Configuration Manager

Create secure configurations and add/edit configuration values in just a few clicks. Generate multiple shared configurations for selected connections, and adjust naming conventions using the smart rename feature. Edit the properties of multiple config files at once.

Reporting Performance Monitor in SentryOne BI xPress provides insight into SSRS performance reports by compiling multiple stats into a concise dashboard.

Pricing

Standard	\$1,095 \$219	Per user, per machine Annual maintenance
Pro	\$1,695 \$339	Per user, per machine Annual maintenance
Server	\$3,995 \$799	Per user, per machine Annual maintenance
Reporting (SSIS Monitoring Console only)	\$199 \$39	Per user, per machine Annual maintenance
