

SQL Sentry Essentials

Best-in-class database monitoring for up to 5 targeted instances

Right-sized and right-priced for smaller database environments, SQL Sentry Essentials includes only the essential features of our flagship SQL Sentry database monitoring product and is ideal for monitoring up to 5 targets, including SQL Server, Azure SQL Database, and Windows.

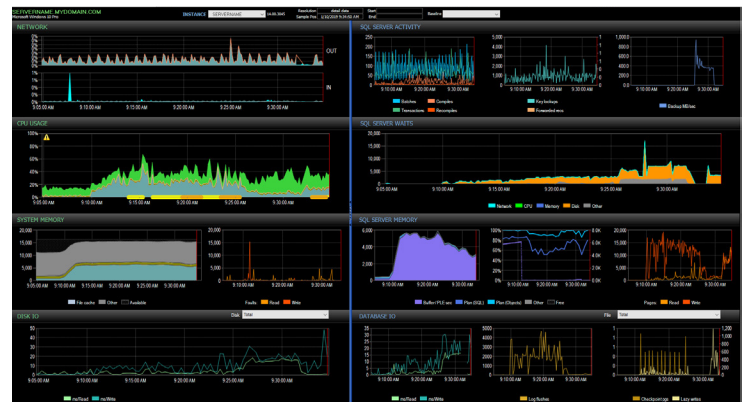

Tired of wasting time fixing SQL Server performance problems?

Even if you have just a few SQL Servers to monitor in your organization, finding and fixing performance problems can burn through valuable time—especially if you have a small team.

Discovering the root cause of problems can be frustrating if you don't have enough detailed information, you don't have visibility into related systems (such as Windows) that might be contributing to slowdowns, or you have a general lack of SQL Server expertise on your team.

There's an easier way to fix SQL Server performance problems

SQL Sentry Essentials from SentryOne provides the critical information you need so that you can monitor, diagnose, and optimize SQL Server performance. With SQL Sentry Essentials, you can quickly find and fix performance problems with SQL Server, Azure SQL Database, or Windows. Plus, you can see an at-a-glance score of your environment's health and proactively manage Advisory Conditions.

See key performance metrics at a glance

See SQL Server performance metrics in an intuitive dashboard, and drill down to specific areas for further analysis.

Analyze high-impact queries

The Top SQL tab displays running queries, completed queries, procedure stats, and query stats as well as query execution plan diagrams and query history.

Troubleshoot SQL Server blocking and deadlocks

The Blocking tab displays all SQL Server blocks that occur during a specified time range in a hierarchical format, and the Deadlocks tab shows real-time and historical deadlocks with a graph so that you can identify problems.

Anticipate and prevent database problems

Stop the deluge of meaningless notifications with Advisory Conditions, which help you watch for the circumstances that lead to performance problems and proactively prevent trouble before it starts.

Analyze and optimize SQL queries

Not a SQL query expert? Not a problem. SentryOne Plan Explorer—included in SQL Sentry Essentials—helps you quickly troubleshoot queries to improve SQL Server database performance.

Compare SQL Sentry (our flagship monitoring product) with SQL Sentry Essentials

Feature	SQL Sentry Essentials	SQL Sentry
Performance Dashboard	X	X
